Contributors	x
Foreword	xi
Preface	xiii
Acknowledgements	xv
Abstract	xvii
<b>1 General Introduction</b>	<b>1</b>
<b>M.J. Kropff</b>	
Competition: a key process in (agro-)ecology	1
Competition and weed management	2
Methods to quantify plant competition	4
Toward a mechanistic understanding	5
Overview	6
<b>2 Empirical Models for Crop-Weed Competition</b>	<b>9</b>
<b>M.J. Kropff and L.A.P. Lotz</b>	
Introduction	9
Competition in monocultures	9
Hyperbolic functions for competition in mixtures	11
The relative leaf area approach	16
The hyperbolic relative leaf area - yield loss equation	16
Time dependence of relative damage coefficient $q$	18
Evaluation of the relative leaf area approach	20
Evaluation of the model for multi-species competition	23
Conclusions	23
<b>3 Eco-Physiological Models for Crop-Weed Competition</b>	<b>25</b>
<b>M.J. Kropff</b>	
Introduction	25
An approach to crop simulation modelling	26
The model INTERCOM for interplant competition	29

Objectives	29
Approach and structure	29
Model structure	30
<b>4 Mechanisms of Competition for Light</b>	<b>33</b>
<b>M.J. Kropff</b>	
Introduction	33
Modelling competition for light	35
CO <sub>2</sub> assimilation of species in a mixed canopy	36
Radiation fluxes above the canopy	36
Light profile within the mixed canopy	38
CO <sub>2</sub> assimilation rates of single leaves	43
Instantaneous canopy CO <sub>2</sub> assimilation rates of the species	44
The daily total canopy CO <sub>2</sub> assimilation rate of the species	46
Light absorption and CO <sub>2</sub> assimilation by stems and reproductive organs	48
Application of the mixed canopy model	49
Maintenance and growth respiration	49
Maintenance respiration	50
Growth respiration	52
Daily growth rate from CO <sub>2</sub> assimilation and respiration rate	52
A simple procedure for simulation of dry matter growth rates in mixed canopies	52
Phenological development	54
Dry matter partitioning	56
Redistribution of dry matter	56
Morphological development: leaf area dynamics	57
Morphological development: height growth	59
Summary and discussion	60
<b>5 Mechanisms of Competition for Water</b>	<b>63</b>
<b>M.J. Kropff</b>	
Introduction and overview of processes involved	63
Soil water balance	65
Potential evapotranspiration	67
Net radiation	68
Reference evapotranspiration	69
Soil evaporation	71
Transpiration of a mixed canopy	72
Potential transpiration	72
Actual transpiration	74
Effects of water shortage on growth processes	74
Discussion	75

<b>6 Mechanisms of Competition for Nitrogen</b>	<b>77</b>
<b>M.J. Kropff</b>	
Introduction	77
Available soil nitrogen	78
Nitrogen uptake	79
Growth reduction	79
Maximum, critical and minimum nutrient contents	80
Competition for nutrients	81
<b>7 Eco-Physiological Characterization of the Species</b>	<b>83</b>
<b>M.J. Kropff and L.A.P. Lotz</b>	
Introduction	83
Light profile in the canopy	83
CO <sub>2</sub> assimilation-light response of individual leaves	85
Maintenance respiration	88
Growth respiration	89
Average light use efficiency	89
Phenology	93
Dry matter partitioning	94
Leaf area	98
Relative death rate of the leaves	101
Plant height	102
Plant-water relationships	103
Discussion and conclusions	104
<b>8 Understanding Crop-Weed Interaction in Field Situations</b>	<b>105</b>
<b>M.J. Kropff, S.E. Weaver, L.A.P. Lotz, J.L. Lindquist, W. Joenje, B.J. Schnieders, N.C. van Keulen, T.R. Migo and F.F. Fajardo</b>	
Introduction	105
History of the development and evaluation of the model INTERCOM	106
Case study 1: Rice and <i>E. crus-galli</i>	109
Case study 2: Sugar beet and <i>C. album</i>	113
Experimental set-up and results	115
Simulation analysis of sugar beet - <i>C. album</i> competition	118
Other case studies	125
Maize and <i>E. crus-galli</i>	125
Tomatoes and <i>Solanum</i> spp.	126
Wheat and a mixture of weeds	127
Eco-physiological analysis of crop-weed competition for light, water and nitrogen in field situations	128
Discussion and conclusions	133

<b>9 The Impact of Environmental and Genetic Factors</b>	<b>137</b>
<b>M.J. Kropff, N.C. van Keulen, H.H. van Laar and B.J. Schnieders</b>	
Introduction	137
Plant density and the period between crop and weed emergence	138
Climatic factors	142
Morphological and physiological species characteristics	144
<b>10 Practical Applications</b>	<b>149</b>
<b>M.J. Kropff, L.A.P. Lotz and S.E. Weaver</b>	
Introduction	149
Predicting yield loss	150
Development of simple predictive tools	150
Impact of (bio) herbicides on damage relationships	154
Spatial weed distribution	155
Predicting yield loss in future crops	156
The critical period for weed control	158
Perspectives for breeding of competitive cultivars	162
Improving weed management	164
Discussion and conclusions	166
<b>References</b>	<b>169</b>
<b>Appendices</b>	<b>187</b>
<b>A1 The FORTRAN Simulation Environment</b>	<b>187</b>
<b>D.W.G. van Kraalingen</b>	
Introduction	187
Integration and time loop	187
Initialization of the states and parameters from external data files	190
The input data files: reading data	190
The TIMER.DAT file	191
The RERUNS.DAT file	194
The PLANT.DAT and SOIL.DAT files	195
Weather data	196
Implementing reruns	198
Output of simulation results	199
Operation of the model	200
Errors and warnings from the FSE program	200
<b>A2 Program structure of the model INTERCOM</b>	<b>201</b>
<b>M.J. Kropff, D.W.G. van Kraalingen and H.H. van Laar</b>	
Introduction	201

Data files needed to operate the model INTERCOM	203
Listings of the model INTERCOM, subroutines and plant data	205
Main program and subroutine PLANTC	205
Subroutine ASTRO	224
Subroutine ASSIMC	225
Subroutine DEVAP	230
Subroutine LEAFPA	231
Subroutine LEAFRE	232
Subroutine PENMAN	233
Subroutine RADIAT	235
Subroutine TOTASS	237
Subroutine TOTRAN	240
Subroutine WBAL	242
Plant data set for sugar beet (SUGARB.DAT)	245
Plant data set for <i>C. album</i> (CHENO.DAT)	246
<b>A3 Definition of the Abbreviations Used in the Model INTERCOM</b>	<b>247</b>
<b>A4 List of Symbols Used in Equations</b>	<b>263</b>
<b>Index</b>	<b>271</b>
