CONTENTS

<i>List of illustrations</i>	vi
<i>Preface to the second edition</i>	ix
<i>Preface to the first edition</i>	xi
<i>Acknowledgements</i>	xiii

1 WATER IN THE TROPICS 1

1.1 Introduction	1
1.2 Evaporation and rainfall	1
1.3 The hydrological cycle	2
1.4 The human factors	4

2 ORIGINS OF PRECIPITATION 7

2.1 Introduction	7
2.2 Earlier concepts of simplicity and uniformity	8
2.3 Basic features of the tropical circulation	9
2.4 The sub-tropical highs	14
2.5 The trade winds	15
2.6 The equatorial trough	17
2.7 The south-east Asian monsoon	20
2.8 El Nino and the Southern Oscillation	23
2.9 Disturbances and rainfall	26
2.10 Other influences on rainfall	37
2.11 Conclusions	43

3 RAINFALL SEASONALITY AND VARIABILITY 44

3.1 Introduction	44
3.2 Seasonal rainfall regimes	45
3.3 Variability	62
3.4 Drought	75
3.5 Rainfall probability and reliability	78
3.6 Daily and pentade variability	82
3.7 Rainfall variability linkages	87
3.8 Fluctuations and trends	90

4 OTHER RAINFALL CHARACTERISTICS

- 4.1 Intensity-duration-frequency
- 4.2 Spatial variations
- 4.3 Diurnal variations
- 4.4 Rainfall and runoff

99
99
117
128
132

5 EVAPORATION

- 5.1 Introduction
- 5.2 Factors influencing evaporation
- 5.3 Evaporation and its relation to rainfall
- 5.4 Climatic classification
- 5.5 Methods of assessment

141
141
141
147
156
159

6 WATER AND PLANTS: A GENERAL REVIEW

- 6.1 Introduction
- 6.2 The significance of water to plants
- 6.3 The atmosphere-soil-plant water system

172
172
172
177

7 WATER AND PLANTS: THE TROPICAL SITUATION

- 7.1 The implications of the nature of tropical rainfall
- 7.2 The implications of the high evaporative demand
- 7.3 Water - yield relationships

191
191
200
208

8 WATER AND AGRICULTURE IN THE TROPICS

- 8.1 Water-balance studies - their application to agriculture
- 8.2 The role of agricultural techniques in crop-water relations
- 8.3 Rainfall regimes and crops: a general survey

229
229
235
261

9 HUMAN IMPACT ON THE HYDROLOGICAL CYCLE

- 9.1 Introduction
- 9.2 Modification of climatic factors
- 9.3 Land use and the hydrological cycle: introduction
- 9.4 Forest cover and the effects of change
- 9.5 The effects of grazing
- 9.6 Modifications to surface water and ground water

268
268
278
280
290
295

10 PROBLEMS AND PRIORITIES**302**

10.1 Introduction

302

10.2 Scientific and technical aspects

302

10.3 The human element

304

LIST OF ILLUSTRATIONS

- 1.1 The hydrological cycle.
- 2.1 (a) Cross-section of the tropical circulation.
(b) Cross-section of the westerly winds and trades.
- 2.2 Major features of the inter-tropical circulation in July.
- 2.3 Major features of the inter-tropical circulation in January.
- 2.4 Airflow in July.
- 2.5 Airflow in January.
- 2.6 Models of convergence and divergence.
- 2.7 (a) North-east trades: rise of the trade-wind inversion and subsidence of the air column due to divergence as air moves towards the equator.
(b) Mechanism of incorporating air in the trade inversion into the lower moist air layer.
(c) Height of the base of the trade-wind inversion.
- 2.8 Monsoon circulation: northern winter (upper); northern summer (lower).
- 2.9 The percentage contribution of monsoon rainfall (June to September) to the annual total.
- 2.10 Streamlines for the layer 850–700 millibars for the western tropical Atlantic on 13 September 1957.
- 2.11 Streamlines at 850 millibars over northern South America on 3–4 July 1952.
- 2.12 Areas of tropical storm development.
- 2.13 Kilimanjaro: rainfall in the 'long rains'.
- 2.14 Kilimanjaro: rainfall in the 'short rains'.
- 2.15 Lake Victoria:
 - (a) Location of Entebbe and Kisumu.
 - (b) Weather over northern lake area.
- 2.16 Hawaiian Islands: variety of sea-breeze–trade-wind effects.
 - 3.1 Average rainfall: January.
 - 3.2 Average rainfall: April.
 - 3.3 Average rainfall: July.
 - 3.4 Average rainfall: October.
 - 3.5 Location of rainfall stations.

- 3.6 Rainfall graphs: Africa.
- 3.7 Rainfall graphs: northern Australia–South-East Asia.
- 3.8 Rainfall graphs: South America–Caribbean.
- 3.9 Tanzania: comparison of traditional seasons with those based on monthly totals of 50 mm and 100 mm.
- 3.10 Distribution of seasonal rainfall types.
- 3.11 Dodoma: annual, January and March rainfall.
- 3.12 Harbell: mean weekly rainfall.
- 3.13 Rainfall in the first, second and third ten-day periods of April at Acarigua, Venezuela.
- 3.14 Thursday Island: May rainfall (1890–1939).
- 3.15 Mozambique: mean rainfall against standard deviation.
- 3.16 Annual rainfall variability.
- 3.17 Normalised series of annual rainfalls in central Sudan (based on 1951–80 means and standard deviations). A: north-central Sudan 14–16°N, B: south-central Sudan 12–14°N.
- 3.18 Nairobi and Gulu: rainy pentades.
- 3.19 Singapore: daily rainfall 1962–66.
- 3.20 Cumulative percentual deviations from the annual mean (1881–1940).
- 4.1 Intensity–duration–frequency relations.
- 4.2 New Guinea: percentage of rainfall in certain intensity classes.
- 4.3 New Guinea: percentage of rainfall in certain sized storms.
- 4.4 New Guinea: cumulative percentage of rainfall against percentage of storms.
- 4.5 Kinetic energy–rainfall intensity relations.
- 4.6 Uluguru Mountains, Tanzania: recurrence intervals.
- 4.7 One-hour precipitation (mm) likely to be exceeded once every two years.
- 4.8 West Malaysia: daily precipitation likely to be equalled or exceeded once every 10 years (left); daily precipitation likely to be equalled or exceeded once every 100 years (right).
- 4.9 Probable maximum precipitation for inland areas, East Africa.
- 4.10 Location of south-east Asian rainfall stations.
- 4.11 Dar es Salaam: rainfall (mm) for 11 March 1969.
- 4.12 Correlation–distance relationships.
- 4.13 Netherlands: correlation–distance relationships.
- 4.14 Ruvu Basin, Tanzania: correlation–distance relationships.
- 4.15 Singapore: diurnal variation of rainfall.
- 4.16 Malaya: diurnal variation of rainfall, August.
- 5.1 Influence of the shape of a water surface and wind direction on evaporation.
- 5.2 Average annual latitudinal distribution of the radiation balances of the earth's surface (R), the atmosphere (R_a), and the earth–atmosphere system (R_g), in kilolangleys per year.

- 5.3 Radiational index of dryness (RN/PL).
- 5.4 Africa: $P-E_R$, April and July.
- 5.5 Water balance: Mandalay, Kayes, Kribi, Bogotá.
- 5.6 Water balance: Colombo, Rio de Janeiro, Mubende, Gandajika.
- 5.7 Cuddalore:
 - (a) water balance (average).
 - (b) water balance (1949).
- 5.8 Songea: water-balance diagram.
- 5.9 Saturated vapour pressure-temperature curve.
- 5.10 Kericho: mean monthly evaporative demand.
- 5.11 Atumatak: mean monthly evaporative demand.
- 5.12 Muguga: comparison of E_o estimates and measured E_t from Kikuyu grass.
- 6.1 Atmosphere-soil-plant water system.
- 6.2 Relationships between soil water potential and water content in the surface soil of a sandy inceptisol, an oxidic ultisol, a clayey vertisol and an andisol.
- 6.3 Effects of transpiration level on the relation between daily crop transpiration and soil water potential (upper) – intermediate root density (4 cm^3 soil per cm root length), rooting to a depth of 20 cm, three transpiration levels. Effect of root density on the relation between daily crop transpiration and soil water potential (lower).
- 6.4 Drying rate of three types of soil (upper); effect of rooting depth on potential evapotranspiration (lower).
- 7.1 Infiltration characteristics of a red earth soil at points 0.5 m, 2.0 m, and 10 m from the trunk of an isolated tree.
- 7.2 Influences of tropical rainfall characteristics on hydrology and soil.
- 8.1 Conservation works.
- 8.2 Storm drain.
